United International University

School of Science and Engineering

Final Assessment Trimester: Fall-2020

Course Title: Probability and Statistics

Course Code: Stat 205 Marks: 25 Time: 1 Hour 15 Mins

There are 3 questions. Answer question no. 1 and any <u>one</u> from 2 and 3.

1. a) Consider the following frequency distribution table. **[10]**

Class	61-65	66-70	71-75	76-80
Frequency	9	13	21	7

(i) **Sketch** the cumulative frequency polygon and find the median from it.

(ii) **Find** mode and mean-deviation from mode.

(iii) **Find** the first four raw moments about $\boldsymbol{A = 75}$; **convert** them to the central moments. Also, **find** the co-efficient of skewness and kurtosis. **Make comments** about the distribution.

$$\boldsymbol{m_2 = m_2' - {m_1'}^2;\quad m_3 = m_3' - 3m_2'm_1' + 2{m_1'}^3;}$$
$$\boldsymbol{m_4 = m_4' - 4m_3'm_1' + 6m_2'{m_1'}^2 - 3{m_1'}^4}$$

b) If the correlation coefficient of two variables is $\boldsymbol{0.5}$ and regression coefficient of $\boldsymbol{x}$ on $\boldsymbol{y}$ is $\boldsymbol{0.8}$. Also, $\boldsymbol{\bar{x} = 31.5}$ and $\boldsymbol{\bar{y} = 42.75}$. **Find** and **sketch** the regression line of $\boldsymbol{y}$ on $\boldsymbol{x}$. **Predict** the value of $\boldsymbol{y}$ when $\boldsymbol{x}$ is $\boldsymbol{40}$ and **verify** it graphically. **[5]**

2. a) Let $\boldsymbol{Y_1 < Y_2 < Y_3 < Y_4}$ be the order statistics of four independent observations $\boldsymbol{X_1, X_2, X_3, X_4}$ each from the distribution with *pdf* $\boldsymbol{f(x) = \frac{1}{4}x^3; 0 < x < 2}$. **Find** $\boldsymbol{P\left(Y_3 \le \frac{3}{2}\right)}$ and the *pdf* of the order statistics. Also, **find** $\boldsymbol{\mu_3(y)}$. **[4]**

$$\boldsymbol{G_r(y) = \sum_{k=r}^{n}\binom{n}{r}[F(y)]^k[1 - F(y)]^{n-k}}$$
$$\boldsymbol{g_r(y) = \frac{n!}{(n-r)!(r-1)!}[F(y)]^{r-1}[1 - F(y)]^{n-r}f(y)}$$

b) Let $\boldsymbol{X}$ equal the daily sell of foods in **kg** by the super shops. Suppose the variance of $\boldsymbol{X}$ is $\boldsymbol{25}$ **kg**. To estimate the mean $\boldsymbol{\mu}$ of $\boldsymbol{X}$, an agency took a random sample of $\boldsymbol{15}$ super shops and found they sold in a total of $\boldsymbol{750}$ kg of foods in a day. **Find** an approximate $\boldsymbol{80}$% confidence interval for $\boldsymbol{\mu}$. **[2.5]**

c) The breaking strengths of cables produced by a manufacturer have a mean of $\mathbf{2500}$ pounds and standard deviation of $\mathbf{100}$ pounds. By a new technique in the manufacturing process, it is claimed that the breaking strength can be increased. To test the claim, a sample of $\mathbf{100}$ cables is tested and it is found that the mean breaking strength is $\mathbf{2575}$ pounds. Construct a hypothesis test. Can we support the claim at the $\mathbf{0.1}$ significance level? **[3.5]**

3. a) Consider $\mathbf{1009, 999, 1013, 998, 1001, 995, 1011, 1005, 993}$ & $\mathbf{1003}$ grams are the weights of soap in a "**1000**-gram" bottle, defined by the random variable $\boldsymbol{X}$. Order them increasingly and find the **mode, median,** $\boldsymbol{D_9}$, and $\boldsymbol{P_{45}}$. **[4]**

b) In a forest $\mathbf{100}$ crocodiles are infected by viral disease, **half** of the crocodiles are brought to a zoo. If $\mathbf{30}$ of the crocodiles survived in the zoo, **find** the confidence interval of the proportion with $\mathbf{10}\%$ significance level. Is the transfer process effective? **[2.5]**

c) **ABC** company produces machineries with the average lifetime is $\mathbf{30}$ years and the standard deviation $\mathbf{5}$ years. It is claimed that, in a new process the mean life time can be increased. **[3.5]**

(i) If the estimated average life time for $\mathbf{40}$ samples is $\mathbf{31.5}$ years, find the $\boldsymbol{p}-$value of the claim of the producer.

(ii) If the new process has increase the mean life time to $\mathbf{32}$ years. Find $\boldsymbol{\alpha}$ and $\boldsymbol{\beta}$ for the estimated mean $\mathbf{31.25}$ years for $\mathbf{35}$ samples.

STANDARD NORMAL DISTRIBUTION: Table Values Represent AREA to the LEFT of the Z score.
