United International University

School of Science and Engineering

CT-05 Trimester: Fall-2020 Section: B

Course Title: Probability and Statistics

Course Code: Stat 205 Marks: 20 Time: 30 Mins

(Answer all the questions)

1. In a certain pollution awareness campaign, one advisor has a survey taken at random among $\mathbf{550}$ people with $\mathbf{70}\%$ of them provided their opinion about the awareness. If the survey secured $\mathbf{265}$ positive opinions. Find an approximate $\mathbf{85}\%$ confidence interval for the fraction $\boldsymbol{p}$ of the people who support the advisor. **[5]**

2. Let $\boldsymbol{Y_1 < Y_2 < Y_3 < Y_4}$ be the order statistics of four independent observations $\boldsymbol{X_1}$, $\boldsymbol{X_2}$, $\boldsymbol{X_3}$ & $\boldsymbol{X_4}$ each from the distribution with ***pdf*** $\boldsymbol{f(x) = 3x^2;\ 0 < x < 1}$. **[8]**

(i) Find the **pdf** of $\boldsymbol{Y_3}$.

(ii) Evaluate $\boldsymbol{P(Y_3 \geq \frac{2}{3})}$.

where,

$\boldsymbol{G_r(y) = \sum_r^n \binom{n}{r} [F(y)]^r [1 - F(y)]^{n-r}}$, $\boldsymbol{g_r(y) = \frac{n!}{(n-r)!(r-1)!} [F(y)]^{r-1} [1 - F(y)]^{n-r} f(y)}$

3. A company produces mechanical tools whose average lifetime is $\mathbf{25}$ years and an average variation of $\mathbf{9}$ years. It is claimed that, in a new process the mean life time can be increased. **[7]**

(i) Design a decision rule for the process at the $\mathbf{0.03}$ significance level to test $\mathbf{35}$ tools.

(ii) If the estimated average life time for $\mathbf{27}$ samples is $\mathbf{30.5}$ years, find the **p**-value of the claim of the producer.

(iii) If the new process has increased the mean life time to $\mathbf{31.25}$ years. Find $\boldsymbol{\alpha}$ and $\boldsymbol{\beta}$ for the estimated mean $\mathbf{28.75}$ years for $\mathbf{30}$ samples.
