

United International University
School of Science and Engineering

CT-05 Trimester: Summer-2020 Section: C

Course Title: Probability and Statistics

Course Code: Stat 205 Marks: 20 Time: 40 Mins

(Answer all the questions)

1. In a certain pollution awareness campaign, one advisor has a survey taken at random among **500** people with **75%** of them provided their opinion about the awareness. If the survey secured **250** positive opinions. Find an approximate **90%** confidence interval for the fraction **p** of the people who support the advisor. [5]
2. Let $Y_1 < Y_2 < Y_3 < Y_4$ be the order statistics of four independent observations X_1, X_2, X_3, X_4 each from the distribution with *pdf* $f(x) = 3x^2$; $0 < x < 1$. [7]
Find $P(Y_3 \geq \frac{1}{3})$ and the *pdf* of the order statistics. Also, find $\mu_3(y)$.
Where,
$$G_r(y) = \sum_{r=0}^n \binom{n}{r} [F(y)]^r [1 - F(y)]^{n-r}, \quad g_r(y) = \frac{n!}{(n-r)!(r-1)!} [F(y)]^{r-1} [1 - F(y)]^{n-r} f(y)$$
3. A company produces mechanical tools whose average lifetime is **25** years and an average variation of **9** years. It is claimed that, in a new process the mean life time can be increased. [8]
 - (i) Design a decision rule for the process at the **0.03** significance level to test **35** tools.
 - (ii) If the estimated average life time for **27** samples is **30.5** years, find the **p**-value of the claim of the producer.
 - (iii) If the new process has increase the mean life time to **31.25** years. Find **α** and **β** for the estimated mean **28.75** years for **30** samples.
