

United International University
School of Science and Engineering

CT-05 Trimester: Summer-2020 Section: A

Course Title: Probability and Statistics

Course Code: Stat 205 Marks: 20 Time: 40 Mins

(Answer all the questions)

1. In a forest there are **1200** animal under severe virus infection, **70%** of the animals are rescued from the forest. If half of the total animals survived after the attempt, find the confidence interval of the proportion with **5%** significance level. Is the rescue process effective? Why? [5]
2. Let X equal to the amount of fruits in **kg per day** consumed by a student. Suppose the standard deviation of X is **0.1 kg**. To estimate the mean μ of X , an agency took a random sample of **20** students and found they consumed **10 kg** of fruits per day. Find an approximate **90%** confidence interval for μ . [5]
3. A company produces electric bulbs whose average life time is **180** days and average variation of **8** days. It is claimed that, by using a newly developed process the mean life time of the bulbs can be increased. [8]
 - (i) Design a decision rule for the process at the **0.1** significance level to test **100** bulbs. Also, what about the decision if the average life time of a bulb (a) **189** days, (b) **207** days.
 - (ii) If the new process has increased the mean life time to **190** days and assuming the estimated sample mean **185.5** days, find α and β for **87** samples.
 - (iii) Suppose for **50** samples average life time is observed as **187.5** days, estimate the p -value of the claim of the manufacturer.
4. A researcher thinks that if expectant mothers use vitamins, the birth weight of the babies will increase. The average birth weight of the population is **8.6** pounds. What are the null and alternative hypotheses? [2]
