School of Science and Engineering

CT-03 Trimester: Summer-2020 Section: A

Course Title: Probability and Statistics

Course Code: Stat 205 Marks: 20 Time: 30 Mins

(Answer all the questions)

1. Customers arrive at a travel agency at a mean rate of 15 per 2 hours. Assuming that the number of arrival per hour has a Poisson distribution, find the probability that the agency will have to wait more than 10 minutes for the arrival of the first customers. Also, find the median time until the first customer arrival. [10]
2. Consider the pdf of a Normal variable X is defined as $f(x) = \frac{1}{\sqrt{98\pi}} e^{-\frac{(x+9)^2}{98}}$
- i) Find the mgf of X . [1]
 - ii) Evaluate $P(-3 > X > -11)$. [3]
 - iii) Find the value of C such that $P(|X + 9| \geq C) = 0.8664$. [3]
 - iv) Find $-Z_{0.9131}$ and convert to X . [3]

Distribution

Pmf / pdf

Poisson

$$f(x) = \frac{\lambda^x e^{-\lambda}}{x!}; x = 0, 1, 2, \dots$$

Exponential

$$f(x) = \frac{1}{\theta} e^{-\frac{x}{\theta}}; 0 \leq x < \infty \text{ \& mgf, } M(t) = \frac{1}{1-\theta t}; t < \frac{1}{\theta}$$

Gamma

$$f(x) = \frac{1}{\Gamma(\alpha) \theta^\alpha} x^{\alpha-1} e^{-x/\theta}; 0 \leq x < \infty$$
$$\text{\& mgf, } M(t) = \frac{1}{(1-\theta t)^\alpha}; t < \frac{1}{\theta}$$

Normal

$$f(x) = \frac{1}{\sigma\sqrt{2\pi}} e^{-\frac{(x-\mu)^2}{2\sigma^2}}; -\infty < x < \infty$$
