School of Science and Engineering

CT-05 Trimester: Summer-2020 Section: B

Course Title: Probability and Statistics

Course Code: Stat 205 Marks: 20 Time: 40 Mins

(Answer all the questions)

1. Consider a Poisson distribution with mean $\lambda = 3$ and $\lambda = 5$. According to a real life experiment $P(\lambda = 5)$ is three times of $P(\lambda = 3)$, where the number of favorable observation in the experiment was $x = 7$. Find the conditional probabilities of $\lambda = 3$ and $\lambda = 5$ under the condition $x = 7$. [5]
2. Let X equals the weight of a soap. A random sample of size **10** of X yielded with weights **513, 493, 498, 501, 495, 511, 505, 493, 511 & 503** grams respectively. Now order them increasingly and find the **Me , D_7** and **P_{37}** . Is there any mode exists? Determine the **semi-range** of the given weights. [7]
3. A company produces an electric tool whose average life time is **200** days and average variation **20** days. It is claimed that, in a newly developed process the mean life time can be increased. If the new process has increase the mean life time to **208** days, assuming a sample of **80** bulbs with estimated life time **205** days, find **α** and **β** . [4]
4. Design a decision rule to test the hypothesis that a coin is fair if we take a sample of **100** coins to get head/tail and use **0.9** as the confidence level. Predict the acceptance and critical region. [4]
